### Unique Business Process Reference and Transformation Framework

We have built Business Flows as a transformation framework. It supports our customers in designing and implementing their future processes, capturing strategic goals and requirements in IT transformations, bridging the gap between business and IT and transforming their business and organization. Business Flows is very versatile and accelerates you in multiple use cases:

### Business Flows is more than a list of processes

The end-to-end scenarios in the domains are designed to address relevant business cases and operating models. Corresponding value chains focus on the interaction of business processes and departments in order to achieve the business objectives. The process flows and graphical process charters are enhanced with advisory notes to highlight process-specific challenges. Additional content on business and value drivers, reporting and KPIs, risks and functional process groups supports a holistic business transformation approach. Considering the included SAP capabilities and scope items, Business Flows is a powerful supplement to the SAP Activate methodology.

## Our Differentiators

- End-to-end process transparency and alignment with business strategy considerations
- Comprehensive reference content with industry-specific end-to-end scenarios
- Suitable for small projects as well as for global initiatives
- Fully compatible to SAP Activate methodology
- Easily accessible on any device and BPM tool independent

**11**  
domains

**170**  
business scenarios

**475**  
BPMNs

Order to Cash

Procure to Pay
